CAREER OBJECTIVE

Data Analyst skilled in SQL, Power BI, Python and Excel with a passion for turning raw data into insights people can actually act on. I'm looking to bring my analytical skills to a team where I can improve how things run, support smarter decisions, and help the business grow. I enjoy turning messy datasets into clear stories that help teams make confident decisions, especially in BFSI and e-commerce sectors.

SKILLS

Data Visualization & BI Development: Power BI, DAX, Power Query, Row-Level Security (RLS), Interactive Dashboards, KPI Tracking & Reporting, Data Storytelling, AI Visuals.

SQL & Data Modeling: SQL (Window Functions & CTEs), Data Modeling, MySQL, ETL (Power Query), Star Schema Design.

Business & Reporting: Exploratory Data Analysis (EDA), Root Cause Investigation, Stakeholder Reporting, Pattern & Trend Identification.

Tools: GCP BigQuery, Google Colab, VS Code, Excel (Advanced), Python.

PROFESSIONAL EXPERIENCE

Associate Business Analyst | ITOrizon India Pvt Ltd

Jan 2025 – Mar 2025

- Trained in Supply Chain Management concepts, workflows and business processes.
- Studied Business Requirement Documents (BRDs), including business and functional requirements and process documentation.
- Participated in a Knowledge Transfer (KT) session on SCM and Manhattan services, gaining exposure to supply chain solutions and operational workflows.

KEY PROJECTS

Customer Shopping Behavior Analysis | Power BI | SQL | Python | [\[GitHub\]](#)

Sep 2026

Problem: The business had thousands of customer transactions, but no clear view of who was spending the most or whether discounts and subscriptions were working, so marketing decisions relied on gut feeling.

Solution: I cleaned the raw data in Python, wrote SQL queries on spending by gender, age group, subscriptions, and discounts, and segmented customers into New, Returning and Loyal. I then built an interactive Power BI dashboard on a dataset of 3.9K customers.

Impact: The dashboard gave a clear picture of 233K in total revenue, with clothing as the top category and young adults as the top spenders. Discounted purchases made up about 43% of revenue, while only 27% of customers were subscribed, pointing to room to grow subscriptions.

Bank Loan Management System | SQL | BigQuery | Data Analysis | [\[GitHub\]](#)

Aug 2026

Problem: Banks often struggle to get a clear view of loan performance and risk because the data is scattered across disconnected records, making it hard for teams to spot repayment issues or risky lending patterns before they become costly.

Solution: I built and structured an 8-table relational database with close to 305K records in BigQuery, then wrote SQL queries using CTEs, window functions, and multi-table joins to dig into borrower behavior and loan trends.

Impact: Answered 13 real business questions a bank might actually ask, giving a clearer picture of loan performance and default patterns while sharpening my SQL skills for BFSI-focused analyst roles.

Adventure Works Dashboard | Power BI | Dashboard Building | [\[GitHub\]](#)

Aug 2026

Problem: Sales, product and customer data lived in separate raw files with no clear structure, so it was hard to get a real read on revenue trends or how products and customers were actually performing.

Solution: I cleaned and shaped that raw data into a proper star schema directly in Power BI, then built out a 4-page dashboard – covering executive KPIs, sales trends, product and returns performance and customer behavior – using over 20 custom DAX measures along with features like AI-powered Key Influencers, decomposition trees, bookmarks, anomaly detection and drill-through pages.

Impact: Turned messy, disconnected files into 4-page interactive dashboards people could actually explore and make decisions from, letting me practice real end-to-end BI work – from data cleaning to polished, decision-ready visuals.
